Chapter 1 Dashboard

1.1 Status

Internet: Display the device status. If the WAN is not connected or configured rightly, it will show offline.

Users Online: The numbers of online users currently.

TCP/UDP connections: Active online packets of TCP/UDP.

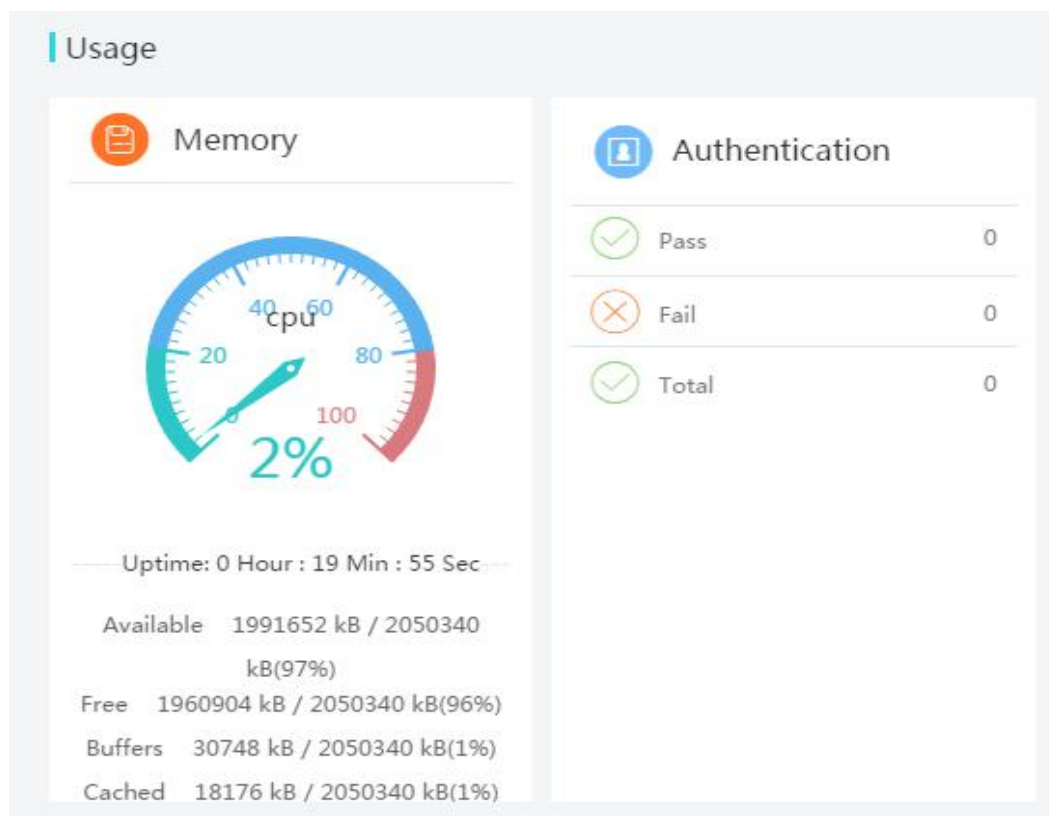

1.2 Other

Support: Enter our WIS website when the user has any questions.

Cloud Platform: Online billing platform.

1.3 Usage

1.3.1 Memory

CPU: The percentage of processing power used by the device.

Uptime: The duration of the device's activity is displayed.

Available: Available memory.

Free: Free space of memory.

Buffer: Buffer of memory.

Cached: Cached memory.

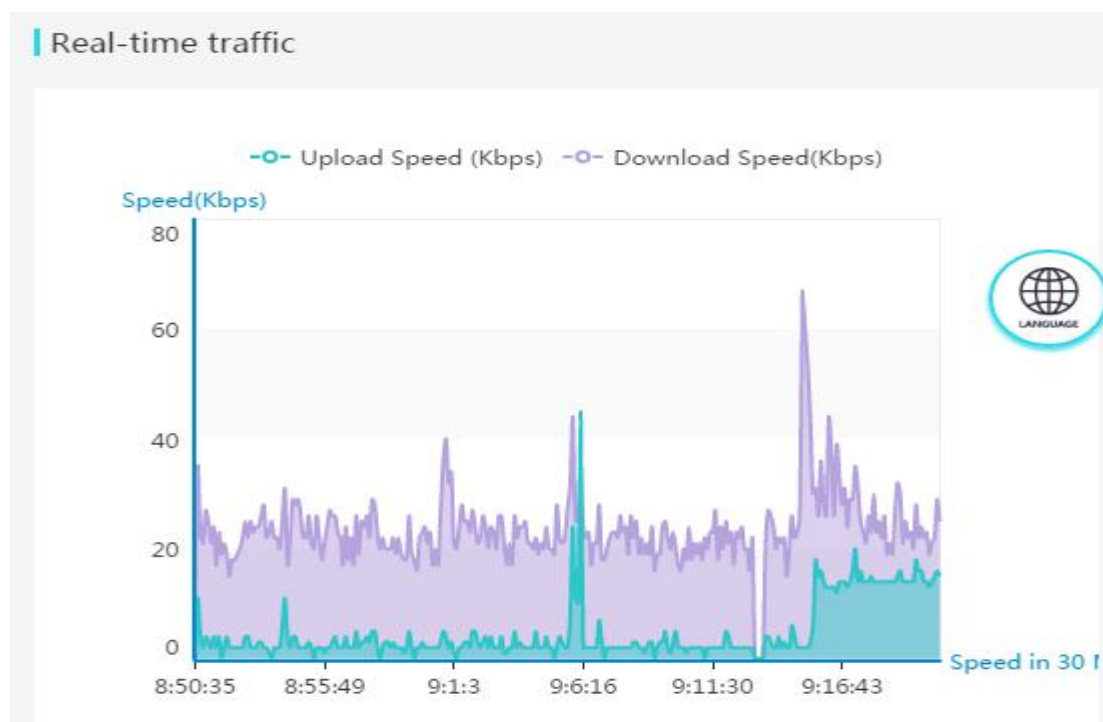

1.3.2 Authentication

Pass: The users have been authenticated.

Fail: The users fail to be authenticated.

Total: The users include passed and failed users.

1.4 Real-time Traffic

Display the bandwidth of thirty minutes. Choose the up speed or down speed to check it separately.

: Language selection.

1.5 Network

WIS - Router

Network Status							
Type ▲	Interface ⚙	Status ⚙	Protocol ⚙	IP address ⚙	Netmask ⚙	Gateway ⚙	
LAN	lan1	Connected	Static	192.168.1.1	255.255.255.0		
WAN	wan	Online	Static	192.168.11.252	255.255.255.0	192.168.11.1	
WAN	wan3	Disconnected	DHCP				
WAN	wan2	Disconnected	DHCP				

Type: Display the connection type.

Interface: Display the name of the interface.

Status: Display the connection status of interface. When the WAN is connected, it shows online or offline.

Protocol: The way to get IP address. Display three types of static, DHCP or PPPoE.

IP address: Display the IP address of the device. This IP will be used for device management purposes.

Net mask: Define the address space of the device's network segment.

Gateway: Display the point of connection to the Internet. The device directs data packets to the gateway if the destination host is not within the local network.

Chapter 2 Status

2.1 Users

Status>Users

IP	MAC	Limit num	Hostname	Username	Src	uptime	Total Traffic(up)	Total Traffic(down)	Speed up(Kbps)	Download Speed(Kbps)	Operation

Interface Name: Display the name of the interface.

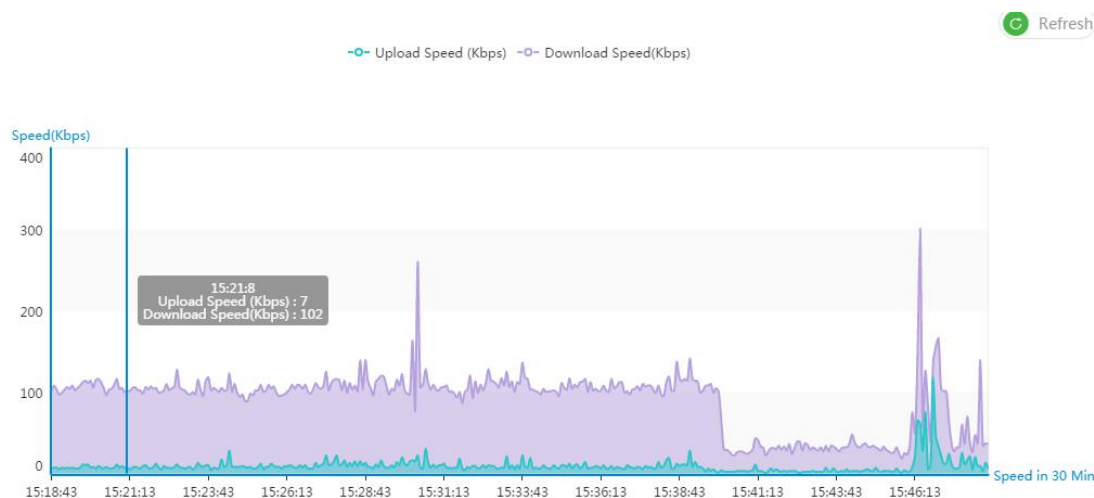

Total Traffic (up): The total amount of upload traffic.

Total Traffic (down): The total amount of download traffic.

Speed Up (Kbps): The upload speed. The unit is Kbps.

Download Speed (Kbps): The download speed. The unit is Kbps.

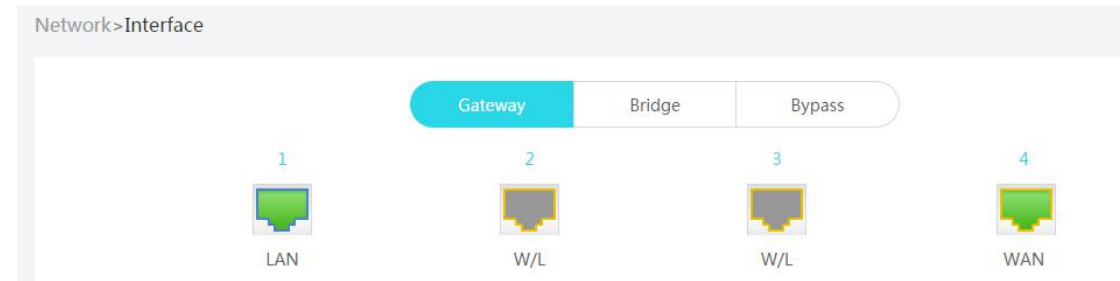

Details: As follows, the upload and download speed are displayed in thirty minutes.

Chapter 3 Network

3.1 Interface

3.1.1 Gateway

LAN:

IP address	<input type="text" value="192.168.1.1"/>
Netmask	<input type="text" value="255.255.255.0"/>
MAC Address	<input type="text" value="00:90:27:ed:5a:86"/>
DHCP Server	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled
DHCP Pool Start	<input type="text" value="192.168.1.100"/>
DHCP Pool size	<input type="text" value="150"/>
Lease time (Min)	<input type="text" value="60"/>
DNS1	<input type="text" value="Please input primary DI"/>
DNS2	<input type="text" value="Please input secondary"/>
<input type="button" value="Save"/>	

IP address: Specify the IP address assigned to the local network. This IP will be used for device management purposes.

Netmask: Define the address space of the network segment.

MAC Address: Display the MAC address of the interface.

DHCP Server: Select Enabled to assign the LAN IP address to the devices.

DHCP Pool Start: Enter the start of the connected users' IP address.

DHCP Pool Size: Input the total amount of IP address assigned to the users.

Lease time (Min): Enter the total time of the leased IP address assigned by the DHCP server.

DNS1: Input the IP address of the primary DNS server.

DNS2: Input the IP address of the secondary DNS server. This entry is optional and used only if the primary server is not responding.

W/L: Display two options of WAN or LAN to choose. The configuration is the same as LAN and WAN.

Switch Port Type ☐ WAN ☐ LAN
☒ Aggregate Interface

Switch Port Type: On the LAN and W/L interfaces, there is an option. When two interfaces select the aggregate interface, their IP addresses are same. They are equivalent of one port.

WAN:

Connection Type	<div> <div>DHCP</div> <div>▼</div> </div> <div> <div>PPPoE</div> <div>DHCP</div> <div>Static IP</div> </div>	
Upload (Kbps)		
Download(Kbps)	<input type="text" value="60000"/>	<input type="button" value="Ref"/>
MAC Address	<input type="text" value="00:90:27:ed:5a:89"/>	
DNS1	<input type="text" value="192.168.11.1"/>	
DNS2	<input type="text" value="223.5.5.5"/>	
ISP	<input checked="" type="radio"/> Unknown <input type="radio"/> CTCC <input type="radio"/> CUCC <input type="radio"/> CMCC <input type="radio"/> CERNET	
<input type="button" value="Save"/>		

Connection Type: Choose the connection type according to the network environment.

The device user can select three types of the DHCP, PPPoE and Static IP. As shown in the picture below.

——DHCP:

Connection Type

——PPPoE:

Connection Type

Username

Password

Username: Enter the username. Enter the username to connect to the PPPoE server.

Password: Enter the password. Enter the password to connect to the PPPoE server.

——Static IP:

Connection Type

IP address

Netmask

Gateway

IP address: Input the IP address if your ISP has assigned static network settings to your network.

Netmask: Input the subnet mask.

WIS - Router

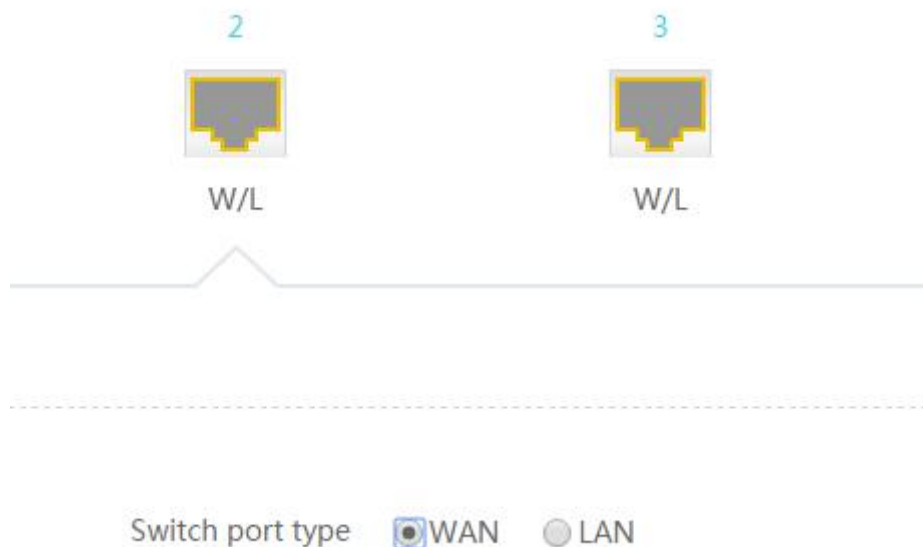

Gateway: Enter the IP address of the ISP's gateway server, which provides the point of connection to the Internet.

Upload/Download: Input the numbers to limit the upload and download speed.

MAC Address: Display the MAC address of the interface.

DNS1/DNS2: the DNS translate domain names to IP addresses. Input the server IP address that the users for translation.

ISP: Select the local ISP.

3.1.2 Bridge

Select this option to bridge the LAN interfaces into a single network.

Input IP, subnet mask, gateway and DNS.

Apply new device mode(Device manage IP address)

IP

Enter IP

Netmask

Please input subnet netm

Gateway

Please input gateway

DNS

Please input DNS info

Confirm

Cancel

3.1.3 Bypass

The mode is for bypass authentication. Input IP, subnet mask, gateway and DNS.

3.2 DHCP Server

Reminder Port

Template ☒ default template ☐ Custom Template

Save Cancel

为了满足客户的需求，在设置到期通告的时候，允许客户使用自己开发定义的模板，来展示用户需要的信息，为了更好的跟我们的服务器对接，现对认证模板的开发做以下的限制要求

1. File format
相关文件统一压缩为zip格式，即经过压缩后的文件名称应该是xxx.zip。

2. Index file
入口文件，即模板的入口文件，统一命名为notice.html在页面上上传成功后，可以通过该地址访问http://xxx.xx/notice/notice.html以验证是否上传成功

3. API
为了与服务器对接，完成到期通知的展示的流程，需要在模板中使用我们定义好的认证接口来完成，以设备的IP地址是192.168.1.1为例，调用http://192.168.1.1/cgi-bin/l_free.cgi?module=portal&op=read方式是post方式提交，json格式，返回的数据也是json格式，格式内容如下示例

```
{
  "success": true,
  "data": [
    {
      "ipaddr": "192.168.21.12",

```

Notification: Enable or disable the notification.

SMS Getway: Enable or disable the SMS Getway.

Redirect Url: Automatic jump address.

Interval: Interval of notification message.

Refresh Time: By this time it will be released to continue use flow until end.

Reminder Port: The port used for notification

Template: Display the default template and custom template. Select one of them.
